

# Data & AI Assessment

## Get added value from your data using BI and AI with Azure

Every organization has a lot of data available, but rarely takes real advantage of it. And yet today, data is the digital raw material for innovation and market differentiation of companies. Can you extract deep insights from your data? Is your data good enough for this? And, if so, can you use it properly and meaningfully to see connections, predict outcomes and implement automation?

Our Data & AI assessment gets you started. Discover the opportunities you can extract immediately using Business Intelligence and Artificial Intelligence, and get a glimpse of the future. We do this based on your vision, objectives and aspirations, and our experience within the sector. And you get a roadmap describing in practical terms how to add intelligence to your applications and workflows using Azure Data Platform services, so you can leverage data to achieve your objectives.

## What can you expect?

The following topics are on the agenda:

- **Inspiration session:** We introduce you to the various possibilities with BI & AI technology based on practical reference cases.
- **Defining objectives:** We work with you to examine how to valorize your data based on your ideas, future plans and current trends, including those used in BI and AI in the sector.
- **Assessment of your current data platform and comparison with the Azure Data Platform:** The focus here is mainly on data components. You gain insight into what a modern data platform looks like, the requirements, and items for attention (including Azure Synapse, Data Factory, Data Lake, Purview, Databricks, Power BI, MLflow, IoT Hub, Stream Analytics, etc.).
- **Security & privacy by design:** Security and privacy are integral to the complete design of both technical components and processes.
- **Data culture:** The data platform is only part of the picture. People and processes must also get involved to make the data project succeed.

## De assessment procedure

### 1. Kickoff

We strive to attain a clear view of your business objectives. We also create inspiration with available AI services.

### 2. Data Understanding

Our Data & AI expert focuses on identifying, collecting and exploring the datasets that can help you achieve your goals.

### 3. Design & advice

We map out the 'as is' and 'to be' situations in terms of technology (Data Platform) and organization, so you can create a data culture (people & processes).

### 4. Deliverable

We collect all information in a practical roadmap, your guide during the actual implementation.

## Would you like more information?

Do you want to understand the full potential of Data & AI on Azure, get an idea of the various possibilities in the most cost-effective way, and learn how to use your data to achieve your company objectives? Our assessment shows you how to take the practical steps and make this a success story within your organization.
